Tests showed that when wood is compressed along the
grain and at small (10°) angles to the grain, the defor-

without any changes taking place in its microscopic
structure. The plastic flow is caused exclusively by
the changes in the submicroscopic structure of the
wood. The region of plastic flow extends to the maxi-

Mean values of the plastic flow limit, σ_{pf} , obtained at

angles close to 90° , the σ_{pf} value is reduced to ap-
